THE SITUATION

A Pentair Jung Pumpen industrial pump had failed on a line producing fruit juices at a large factory in South Wales. Production on the line had stopped.

A replacement new pump was only available from the OEM on a four-week leadtime.

THE SOLUTION

The customer contacted their local HAYLEY DEXIS branch with the urgent requirement for an alternative pump to be sourced from stock or a temporary repair to be carried-out on the failed asset. The most cost-effective and quickest solution was to take the pump away for repair work, and this was arranged immediately.

SERVICES

THE RESULT

After just three days, the failed unit had been repaired, returned and recommissioned on-site, bringing production back up to normal levels.

As a result of the work, the customer avoided a loss of revenue amounting to around £298,000.
