## HAYLEY DEXIS DEFENCE

The defence environment is moving toward increased readiness, sovereign capability and rapid surge output. Procurement teams now need partners with the national footprint, governance and technical capability to deliver reliable, risk-controlled MRO support. Below, we outline why HAYLEY DEXIS is a trusted partner for the UK's defence industrial base, providing the sovereign supply chain resilience essential for success.

### 1. KEEPING THE SUPPLY SHORE

Global supply chains remain unpredictable due to geopolitical instability, port congestion and material shortages. Defence programmes cannot risk uncertain availability.

HAYLEY DEXIS operates a fully UK-based distribution network with over fifty branches and specialist centres, ensuring critical components remain accessible despite international disruption. This national stockholding provides short, predictable domestic lead times to keep programmes on schedule. By removing offshore risk, we support the MOD's ambition to strengthen sovereign supply chains across key MRO categories.

### 2. STAYING ALOFT DURING PEAK TAKE-OFF

Defence supply chains must scale quickly for operational tempo or urgent requirements.

HAYLEY DEXIS' national same- and next-day delivery capability ensures rapid mobilisation during demand surges. Our long-standing supplier relationships provide access to expedited timescales, even when stock isn't immediately available in our warehouses. As an MRO specialist, we understand escalation urgency and have the capacity and infrastructure to support high-intensity operational demand.

### 3. KEEPING TABS ON THE HEAVY HITTERS

Non-aligned suppliers create vulnerabilities defence organisations can no longer accept.

HAYLEY DEXIS maintains diverse, vetted supplier pathways to avoid single points of failure across bearings, fluid power, PPE and electrical components. Our governance processes align with MOD and Tier 1 expectations around quality, ethics and security. Thousands of engineering and maintenance professionals trust us for traceable, genuine and compliant products—essential for regulated defence environments.

### 4. KEEPING IT SHIPSHAPE WITH LOCAL DRAFTING

Technical downtime limits output and reduces asset availability.

Our 24/7/365 UK-based engineering support provides fast diagnostics, machining, refurbishment and repairs. This local capability significantly reduces mean time to repair (MTTR) and limits reliance on long OEM lead times for non-critical work. Partnering with HAYLEY DEXIS brings lifecycle asset support, not just component supply.

### 5. STAYING ABOVE BOARD IN GOVERNANCE

Defence programmes require rigorous standards in cybersecurity, quality, traceability and environmental performance.

HAYLEY DEXIS is certified to ISO 9001, ISO 14001 and ISO 50001, proving our commitment to quality and responsible environmental practice. Our JOSCAR accreditation aligns us with defence compliance needs, while Cyber Essentials supports modern procurement requirements.

### 6. DELIVERING THE RIGHT CONTROL

Effective stock planning is essential for defence availability but overspending wastes budget.

Our Onsite Solutions place trained specialists within defence facilities for real-time stock control and alignment. Vendor-managed inventory ensures critical items remain available at point of use. With our industrial vending and stores management solutions, customers gain controlled access to spares, tools and consumables. These models improve accessibility, reduce disruption and support both readiness and cost efficiency.

### 7. CLOSING THE GAP ON RELIANCE AND DRIVING SOVEREIGNTY

UK defence strategy prioritises domestic resilience and scalable UK capability.

Our operational model: logistics, distribution, services and engineering, is fully UK-anchored, strengthening the national industrial base. With in-house expertise and local service teams, we support long-duration, high-tempo programmes without offshore dependency.

### 8. BRIDGING THE GAP WITH INTEGRITY

Multiple defence locations create complexity, making consistency vital.

Our UK network delivers uniform service standards across all sites, backed by standardised processes for predictable quality and technical support. HAYLEY DEXIS supports both local requirements and national-scale contracts reliably. As part of D&C's industrial arm, DEXIS, since 2016, we also offer Pan-European reach and enhanced sourcing capability.

Sovereign supply-chain resilience requires long-term commitment, trusted partnerships and the right capabilities at every level.

**HAYLEY DEXIS provides the engineering expertise, national distribution and accredited governance needed to support the UK's defence sector as it advances toward a more autonomous and resilient future.**
